

Press release

Wendelsheim 12 November 2010

The company mfd Diagnostics in Wendelsheim expands its capacities for cryopreservation and embryo transfer

After the mfd Diagnostics GmbH has increased its staff in cryopreservation and embryo transfer significantly, customer requests are served promptly under the experienced leadership of Mrs. Olga Wiese. Current offers now include a much shorter time frame for conducting the experiments. New calculation bases lead in many cases to lower prices for the customer than before.

Cryopreservation and embryo transfer provide key elements of a backup and recovery strategy for valuable colonies. The all-round service of mfd diagnostics for cryopreservation and embryo transfer complies with the customer's request.

Services in Cryopreservation:

- breeding at mfd Diagnostics
- production and freezing of mouse embryos
- vitality test
- storage in liquid nitrogen
- embryo re-implantation, the health examination following
- postnatal mouse husbandry

Services in embryo transfer:

- breeding at mfd Diagnostics
- embryo transfer, the health examination following
- postnatal mouse husbandry

Research companies often have important breeding strains that are not needed for the current research, but take up space, food and health care. "Cryopreservation is a simple way to save that cost and make the free space available for other current experiments. In addition, the cryopreservation of mice gives protection against the loss of colonies due to reduction of offspring, disease, genetic contamination and other disasters. The saving of costs for not keeping currently not used strains is significant," said Dr. Mark Maringer, Head of Contract Research of the mfd Diagnostics GmbH.

Additional Information

Company profile of mfd Diagnostics GmbH

MFD stands for Models, Facts, Dates. The company was founded out of the University of Mainz in 2004 and sees itself as a service provider for biomedical research. The team is formed by professionals with extensive experience in animal husbandry and breeding, as well as in diagnostics, pharmacology and pathology. Particular attention is paid on individual consultation and service-orientation.
