

Press release

Wendelsheim 2 Dezember 2010

Expanded capacities for histological studies of mfd Diagnostics, Wendelsheim

The comprehensive range of veterinary diagnostics of the company mfd Diagnostics covers histological and immunohistochemical studies on both fixed and paraffin frozen sections. Due to an increase in capacity orders may now be performed quickly and cheaply.

mfd Diagnostics has many years of expertise in the field of histology and immunohistochemistry. Customers may either use the animal transport service in order to remove sample material of animals to be examined on the spot, or send removed tissue.

"Of course, the particular requirements will be discussed in detail with the customer and then a comprehensive corresponding histological documentation will be created," said Olga Wiese, responsible employee of the diagnostics department.

Additional Information

Company profile of mfd Diagnostics GmbH

MFD stands for Models, Facts, Dates. The company was founded out of the University of Mainz in 2004 and sees itself as a service provider for biomedical research. The team is formed by professionals with extensive experience in animal husbandry and breeding, as well as in diagnostics, pharmacology and pathology. Particular attention is paid on individual consultation and service-orientation.
