Wendelsheim 18th February 2011

Enhanced capacity for mfd Diagnostics - the move is done

As planned, the expansion of the Mikroforum is completed and we started to work in the new building of the high-technology park Wendelsheim on 1 February.

The new premises allow us to expand our laboratory and husbandry capacity significantly. Through close cooperation with the management planning of the Mikroforum the interior is tailored to our needs. The functional areas are divided into an office unit, several separated laboratories and operating rooms as well as a rodent and a pig husbandry. The animal facilities are particularly designed to functionality and economics complying with legal regulations and rules. Special emphasis is placed on proper hygienic separation of different areas. Individual ventilation units, strict physical separation of clean and unclean areas and strict access restrictions ensure the highest possible level of hygiene.
