

From basics to essentials
From diagnostics to in vivo-research

Antibodies and Assay Development

We supply you with your specific antibody

Our customized antibody services include peptide design, synthesis, labelling and conjugation, polyclonal and monoclonal antibody production, purification and immunoassay development.

Antibody generation

- Peptide immunisation
- DNA immunisation
- Monoclonal antibodies in mouse
- Polyclonal antibodies in mouse, rat and guinea pig
- Immunisation in genetically modified animals is possible (S1)

Purification of raw antiserum

Testing of antisera

Assay Development

We develop the antibodies required for your antibody based assay, test and evaluate the assay and deliver microtiter plate based test systems for high throughput screening.

Your unique assay is based on

- confidential consultation
- detailed project analysis
- feasibility evaluation
- optimal development

ISO 9001 certified
