From diagnostics to in vivo-research

Diagnostics

Complete health monitoring service for laboratory animals

Health monitoring follows the recommendations of the Federation of European Laboratory Animal Science Associations (FELASA). Furthermore, we are able to detect a variety of additional germs.

Our services include:

- Serological tests (ELISA/IFA)
- Direct antigen test (RT-PCR / PCR)
- Parasitology
- Pathology (histopathology)
- Microbiological tests (differentiation, antibiogram)

All tests are conducted according to standardised and validated processes.

Positive results from serology are double checked for accuracy by an external laboratory.

We offer an animal transport service in a fully air-conditioned van.

mfd diagnostics GmbH regularly participates successfully in inter-laboratory tests. This additional external validation ensures we provide services of only the very highest standard.
