

From basics to essentials
From diagnostics to in vivo-research

Antibodies and Assay Development

We supply you with your specific antibody

Our custom antibody services include peptide design, synthesis, labelling and conjugation, polyclonal and monoclonal antibody production, purification and immunoassay development. Because a reliable immunoassay demands reliable antibodies.

Antibody generation

- Peptide immunisation
- DNA immunisation
- Monoclonal antibodies in mouse
- Polyclonal antibodies in mouse, rat and guinea pig
- Immunisation in genetically modified animals is possible (S1)

Purification

Testing of antisera

Assay development

For your antibody based assay we develop the antibodies required, test and evaluate the assay and deliver microplate based test systems for high throughput screening.

Your unique assay is based on

- confidential consultation
- detailed project analysis
- feasibility evaluation
- strategy development
