

From basics to essentials
From diagnostics to in vivo-research

Husbandry and breeding service

We're dedicated to providing the quality animal services that can help you accelerate your research. All our programs have a high standard of compliance with applicable federal, state and local laws and regulations, such as the federal Animal Welfare Regulations, ascribing to the philosophy that good animal welfare is good science.

Providing care and maintenance for laboratory animals in our facilities means:

- Providing high quality husbandry supported by data on animal welfare outcomes
- Facilities for mice, rats, guinea pigs, hamsters
- Environment appropriate to the species
- High quality diet
- Prevention of pain or distress through thoughtful design of procedures and models
- Identifying animals by ear punch, cage identity card, cage number and databank
- Health surveillance of animals
- Provision of appropriate veterinary care and routine treatments to animals

Our breeding programs will be custom designed to meet your unique needs. The individual solutions will allow you to relieve crowding in your facility and to save money over in-house programs. It frees up time spent performing animal husbandry for your research activities.

The plant and security is monitored and serviced 24 hours a day.

We offer a door-to-door transportation service with timely deliveries and as little stress as possible on the animals.
